Student Management System Project (PHP + MySQL + HTML)

Project Title

Student Management System

Project Objectives

By the end of the project, students should be able to:

1. Create HTML forms
2. Connect PHP to a MySQL database
3. Insert records into a database
4. Display records from a database
5. Delete records
6. Understand basic CRUD operations

Student Exercises

1. Add Update/Edit functionality
2. Add student photo upload
3. Add search functionality
4. Add login system
5. Validate forms using JavaScript
6. Improve CSS design

Technologies Used

- PHP
- MySQL
- HTML
- CSS
- XAMPP or WAMP

Project Structure

```
student_management/
│
├── index.php
├── add_student.php
├── view_students.php
├── delete_student.php
├── db_connect.php
└── style.css
```

Step 1: Create the Database

Open phpMyAdmin and run the following SQL:

```
CREATE DATABASE student_db;

USE student_db;

CREATE TABLE students (
    id INT AUTO_INCREMENT PRIMARY KEY,
    fullname VARCHAR(100),
    email VARCHAR(100),
    course VARCHAR(100)
);
```

Step 2: Database Connection File

db_connect.php

```
<?php

$host = "localhost";
$user = "root";
$password = "";
$database = "student_db";

$conn = mysqli_connect($host, $user, $password, $database);

if(!$conn){
    die("Connection Failed: " . mysqli_connect_error());
}

?>
```

Step 3: Home Page

index.php

```
<!DOCTYPE html>
<html>
<head>
    <title>Student Management System</title>
    <link rel="stylesheet" href="style.css">
</head>
<body>

<div class="container">

    <h1>Student Management System</h1>

    <a href="add_student.php">Add Student</a>
    <a href="view_students.php">View Students</a>

</div>

</body>
</html>
```

Step 4: Add Student Page

add_student.php

```
<?php
include 'db_connect.php';

if(isset($_POST['submit'])){

    $fullname = $_POST['fullname'];
    $email = $_POST['email'];
    $course = $_POST['course'];

    $sql = "INSERT INTO students(fullname, email, course)
            VALUES('$fullname', '$email', '$course')";

    if(mysqli_query($conn, $sql)){
        echo "Student Added Successfully";
    } else {
        echo "Error: " . mysqli_error($conn);
    }
}
?>

<!DOCTYPE html>
<html>
```

```
<head>
    <title>Add Student</title>
    <link rel="stylesheet" href="style.css">
</head>
<body>

<div class="container">

<h2>Add Student</h2>

<form method="POST">

    <label>Full Name</label>
    <input type="text" name="fullname" required>

    <label>Email</label>
    <input type="email" name="email" required>

    <label>Course</label>
    <input type="text" name="course" required>

    <input type="submit" name="submit" value="Add Student">

</form>

<a href="index.php">Back Home</a>

</div>

</body>
</html>
```

Step 5: View Students

view_students.php

```
<?php
include 'db_connect.php';

$sql = "SELECT * FROM students";
$result = mysqli_query($conn, $sql);
?>

<!DOCTYPE html>
<html>
<head>
    <title>View Students</title>
    <link rel="stylesheet" href="style.css">
</head>
<body>

<div class="container">
```

```
<h2>Student Records</h2>

<table>

<tr>
    <th>ID</th>
    <th>Full Name</th>
    <th>Email</th>
    <th>Course</th>
    <th>Action</th>
</tr>

<?php
while($row = mysqli_fetch_assoc($result)){
?>

<tr>
    <td><?php echo $row['id']; ?></td>
    <td><?php echo $row['fullname']; ?></td>
    <td><?php echo $row['email']; ?></td>
    <td><?php echo $row['course']; ?></td>
    <td>
        <a href="delete_student.php?id=<?php echo $row['id']; ?>">
            Delete
        </a>
    </td>
</tr>

<?php
}
?>

</table>

<a href="index.php">Back Home</a>

</div>

</body>
</html>
```

Step 6: Delete Student

delete_student.php

```
<?php
include 'db_connect.php';

$id = $_GET['id'];

$sql = "DELETE FROM students WHERE id='$id'";

if(mysqli_query($conn, $sql)){
```

```
    header("Location: view_students.php");
} else {
    echo "Error deleting record";
}
?>
```

Step 7: Styling File

style.css

```
body{
    font-family: Arial;
    background-color: #f2f2f2;
}

.container{
    width: 60%;
    margin: auto;
    background: white;
    padding: 20px;
    margin-top: 40px;
    border-radius: 10px;
}

h1, h2{
    text-align: center;
}

form input{
    width: 100%;
    padding: 10px;
    margin-top: 10px;
}

table{
    width: 100%;
    border-collapse: collapse;
    margin-top: 20px;
}

table, th, td{
    border: 1px solid black;
}

th, td{
    padding: 10px;
    text-align: center;
}

a{
    text-decoration: none;
    padding: 8px;
    background: blue;
```

```
    color: white;
    border-radius: 5px;
}
```

How to Run the Project

Using XAMPP

1. Install XAMPP
2. Start:
    - Apache
    - MySQL
3. Copy the project folder to:

```
htdocs/
```

4. Open browser and visit:

```
http://localhost/student_management
```

Expected Learning Outcomes

Students will learn:

- HTML form design
- PHP form handling
- Database connection
- SQL queries
- CRUD operations
- Basic web application development
